

FACE Plus

Reliable Identification with the Latest Facial Recognition Technology

FACE Plus provides accurate, reliable identification using the latest facial recognition matching technology and tools to manipulate and compare images. FACE Plus generates facial templates from mugshots or any facial image repository.

Advanced Case Management

Track and store multiple search scenarios in a case. You can input and manage multiple views of probe images taken from JPEG or TIFF single image files as well as AVI and MPEG video files. Then you will be able to create a variety of searches with different probe images and data field selections for filtering. Each search will be saved in the case file. Select a combination of searches to review a blended result based on match scores.

Image Enhancement

Images can be edited to provide even more accurate results by marking the eye locations, cropping the images to be similar, correcting image brightness, and other basic editing functions. Pose correction and lighting normalization is also available, allowing you to search facial images that were once unsearchable.

Facial Comparison

Compare images side-by-side or edit copies of images for easier viewing or to clarify certain details. You can overlay two images to view distinct images, or view a "curtain" image, which displays the left portion of one image and the right portion of the other image.

Select eye locations and match poor source photos.

Pose Correction: Create and manipulate 3D models to the view you need.

Tattoo Matching

DataWorks Plus

A Leader in Law Enforcement and Criminal Justice Technology

FACE Plus - - Accurate, Reliable Identification

Identification at Booking

Inmates can be screened at booking to verify if they have a previous record. If a facial recognition hit is returned, you can choose to automatically import the existing data from the previous booking into the new booking.

Watch List

FACE Plus can ensure all records are screened against your user defined watch list or other database for wanted individuals. The watch list monitor gives real-time feedback if a hit occurs against the watch list. You can view all matches and associated images. Contact information and protocols displayed with the match make it easy for the right procedures to be followed if a match occurs.

Success Stories

Philadelphia Police Detective working with FBI

The detective sent a photo to JNET to be run against the JNET facial recognition database. The individual was a target in a Squad 2/Violent Gang & Drug Task Force investigation. The individual was described as black male, approximately 23 years old and 5'5" tall, 150 pounds, from the Germantown area of Philadelphia. The image was searched in facial recognition system and a probable match was sent to the agent for confirmation.

PA Office of Attorney General, Philadelphia Office

The Attorney General's Office sent image to JNET of an individual sitting on a public bench in an urban area. Using facial recognition, the JNET office was able to crop the photo and use the 3D tools to create a face-forward pose. This image was searched using the facial recognition system and the confirmed hit was in the top 10 of one of the result sets.

DataWorks Plus is dedicated to providing the Law Enforcement and Criminal Justice Market with affordable, top of the line products and technology to improve the productivity, efficiency, and safety of officers and other staff. We offer solutions for mobile identification, inmate tracking, booking, crime scene data and image management, live scans, fingerprint archive, facial recognition, records management, and fusion centers.
