

## SECURE MOBILE DATA SERVICE

# Authentication That Works For You

Secure Mobile Data Service (SMDS) from DataWorks Plus provides Mobile Device Management software, two-factor authentication, and a customizable shell with advanced features to ensure that your agency complies with FBI CJIS Security Policy.

### Mobile Device Management

DataWorks Plus has created a customizable shell and integrated Mobile Device Management (MDM) from SOTI into our application to provide advanced features. The shell enables your device to have as few or as many apps as you need - all accessible from an easy-to-use graphical interface. MDM allows DataWorks Plus to easily manage your Evolution users and devices in order to comply with the CJIS Security Policy.

### Two-Factor Authentication

Two-Factor Authentication requires not only a username and/or password, but also an additional layer of security (i.e. fingerprint verification) before allowing access.

### Bundle and Save

SMDS will work with your Verizon or AT&T cellular plan, but you can bundle it with a DataWorks Plus-provided Verizon data plan for additional savings and ease of use. When you bundle with our company-provided data plan, you get more than just reliable connectivity - you get streamlined support. No more juggling multiple vendors or waiting on hold with different tech teams. One number. One team. Total peace of mind.

## Ready to Upgrade to Justice 2.0?
